

Table 1: Replication of Guren et al. (2021), Table 1

	YoY Log Diff in Retail Emp Per Capita		
	(1)	(2)	(3)
<b>Panel A: Panel A: 1978–2017</b>			
YoY Log Diff in HP Growth	0.085*** (0.007)	0.057*** (0.017)	0.084* (0.048)
First Stage <i>F</i> -Stat		235.16	19.67
First Stage Partial $R^2$		0.17	0.03
<b>Panel B: Panel B: 1990–2017</b>			
YoY Log Diff in HP Growth	0.081*** (0.008)	0.072*** (0.015)	0.141*** (0.037)
First Stage <i>F</i> -Stat		434.18	20.41
First Stage Partial $R^2$		0.28	0.04
<b>Panel C: Panel C: 2000–2017</b>			
YoY Log Diff in HP Growth	0.067*** (0.008)	0.055*** (0.014)	0.134*** (0.035)
First Stage <i>F</i> -Stat		347.48	21.12
First Stage Partial $R^2$		0.31	0.05
Specification	OLS	IV	IV
Instrument		Sensitivity	Saiz Elast
Num. CBSAs	380	380	270
Yr-Qtr FE			✓
Region, Yr-Qtr FE	✓	✓	
CBSA FE	✓	✓	✓

*Notes:* Replication of ?, table 1 using the equation  $\Delta y_{i,r,t} = \psi_i + \xi_{r,t} + \beta \Delta p_{i,r,t} + \Gamma X_{i,r,t} + \epsilon_{i,r,t}$ .  $\Delta y_{i,r,t}$  is the log annual change in quarterly retail employment per capita (a consumption proxy in year-over-year first-difference form) for CBSA  $i$  in census region  $r$  at time  $t$ .  $\Delta p_{i,r,t}$  is the log annual change in quarterly house prices for CBSA  $i$ .  $\psi_i$ ,  $\xi_{r,t}$ , and  $X_{i,r,t}$  represent CBSA fixed effects, census region  $\times$  time fixed effects, and other controls, such as industry shares, respectively. See ? for a full list of controls. Robust standard errors clustered by time and CBSA are in parentheses. One, two, or three asterisks represent statistical significance at the 10, 5, and 1 percent levels, respectively.
